

Renovation of apartment in central Stockholm to provide a new bedroom and an improved kitchen/dining space.

View towards bedroom

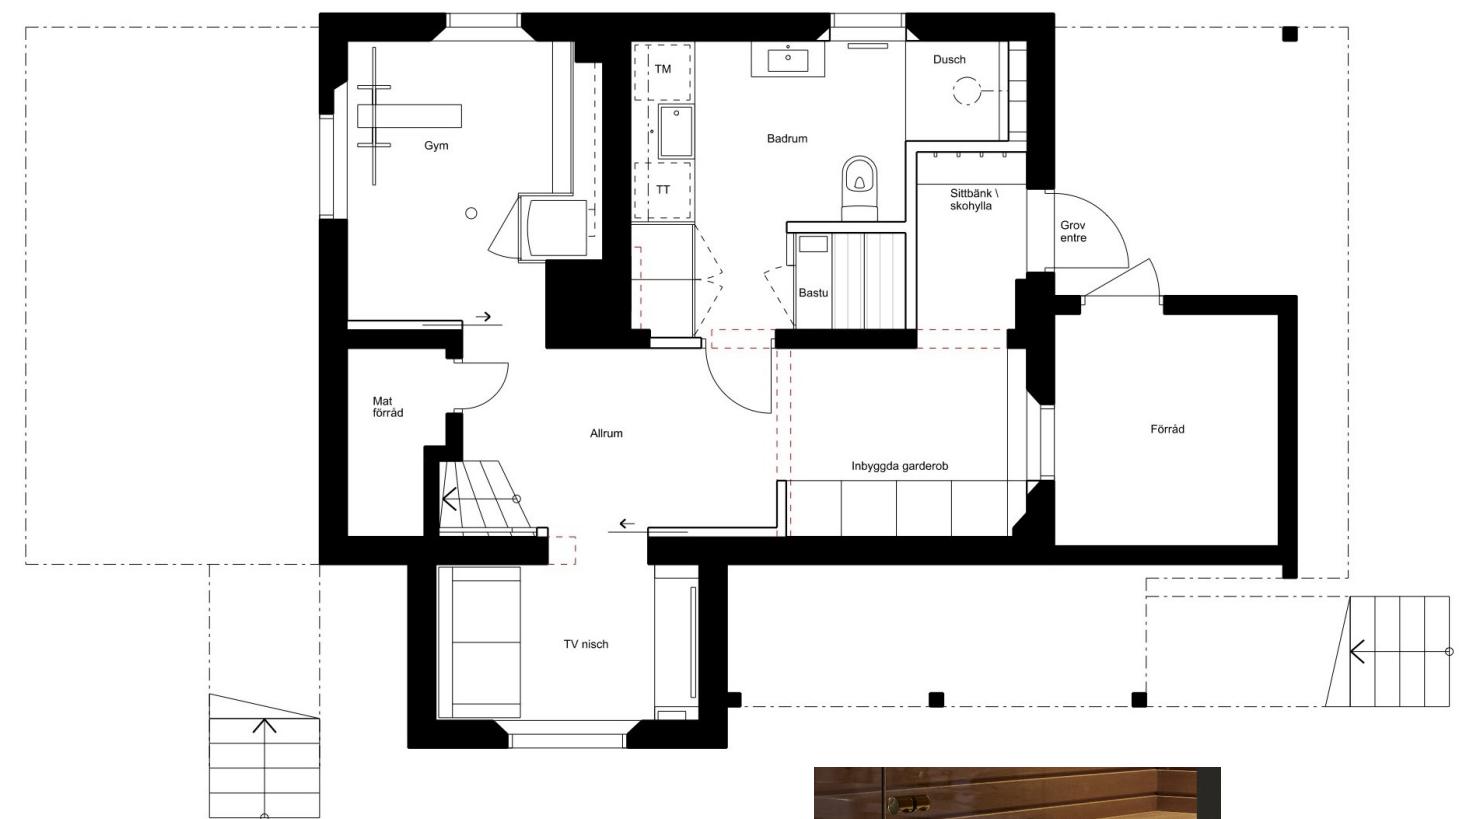

View towards bathroom

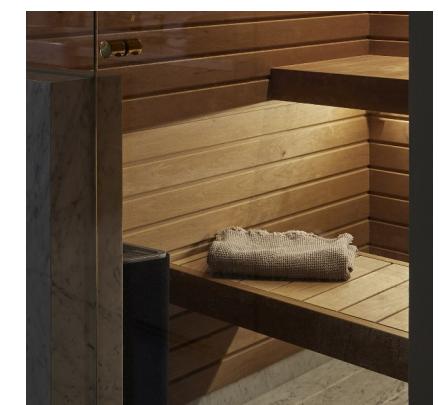

New dining area

New kitchen

Renovation of an existing basement in a family home to provide a modern bath / laundry room, gym and 'boot room'.

New sauna in bathroom

New bath / laundry room

## Renovation projects tillsammans med Dryft AB Stockholm

### Ongoing

In 2020 LumArc began collaborating with Dryft AB in order to provide design and construction service to clients living in the Stockholm area.

These projects for the most part involve the renovation of existing apartments, houses and even basements, a popular project among homeowners in Stockholm where floor area prices per square meter are at a premium.

In most cases the existing properties are surveyed and a number of options for renovation are produced. A final proposal is then produced after a period of consultation with the client and any required permissions are acquired before construction begins. Dryft AB provide a comprehensive project management service during the construction phase using their extensive renovation expertise and contacts within the construction sector.

Contact Dryft using the below details if you wish to discuss a project!
